

All About Seed Harvest Spoon

I've had a magnificent time at Seed harvest spoon. I learnt that honey bees come from Europe! Also I learnt about pests and predators so those awful, horrible, terrible, filthy, evil, wicked and unspeakable pests can make your plants get sick. But if you have some fabulous, amazing, terrific, wonderful, great and tremendous predators like lady-bugs, birds, a couple of snakes and some spiders that is

really good because they can eat
all the pests. Also warning, don't
have so many amazing predators
because you must keep your garden
in balance. We also learnt that if
a root is longer than the
beautiful plant then it is
called a tap-root. We learnt
weeds are something which grows
in the wrong place. I was also
really surprised because Natalia
who tells us all things she said
that you can eat **WEEDS!!!**
Also I love how some amazing
bees get honey make them
into little balls and each
bee takes one of the sweet
yummy honey balls and when
ever a predator comes

All of the fantastic bees
throw the honey balls and
the predator gets stuck. I
also learn t that the bee
workers are GIRLS! So it
means the queen bee lays
the eggs she lays mostly
terrific girl eggs.
